

SLURPZAK[®]

HELPS PREVENT
WATER DAMAGE

DIRECTIONS
FOR USE

GENERAL INFORMATION

THE SLURPZAK, HELPS PREVENT WATER DAMAGE!

The climate is changing. Severe thunderstorms are becoming more common, increasing the chance of water damage. The SLURPZAK, an innovative Dutch product, offers fast and effective protection against flash flooding. When the SLURPZAK comes in contact with water, it swells up, absorbing up to 20 litres of water. Within minutes, it forms a strong barrier against rising water. With a few sacks, you can build a wall to protect your home, shop, business, garage, tent, air vents, etc.

AVAILABLE IN MANY SHAPES AND SIZES

There's a SLURPZAK for every situation. Sacks can be made for you in various shapes and sizes and are available in stock.

APPLICATIONS

The SLURPZAK can also be used as an absorption blanket for leaks in pipes, washing machines, roofs, boats, basements, offices, etc.

STORAGE

Store the SLURPZAK in its original sealed packaging in a dry place at all times. This will preserve its effectiveness for up to 5 years.

DISPOSAL and ENVIRONMENT

After use, dispose of the SLURPZAK in the ordinary rubbish or take it to the municipal waste collection area. The contents are non-toxic and can be filtered in water purification plants. The SLURPZAK cover is made from fully recyclable polyester needle felt.

CAUTION

Never empty the SLURPZAK into your toilet, sink or sewer. This could cause serious stoppages. Keep out of reach of children.

DIRECTIONS FOR USE

To get the SLURPZAK to expand quickly, we advise you to soak it in a bucket of water for at least 3 minutes.

In a heavy storm, rainwater will also cause the SLURPZAK to expand within a few minutes. Then use several SLURPZAKs to create an effective barrier in the place where you want to keep water from coming in.

To expand the SLURPZAK quickly:

1. Fill a bucket with water. Buckets can also be ordered on www.SLURPZAK.nl

2. Open the package and remove the SLURPZAK.

3. Immerse the SLURPZAK in the bucket of clean water.

4. Wait 3 minutes for the SLURPZAK to expand completely.

5. Remove the expanded SLURPZAK from the water. Position it in the place where you want to keep water from coming in.
